

Lookout brings AI marine vision to boaters worldwide with expanded global dealer network

LOOKOUT, the award-winning leader in AI marine vision, today announced a major expansion of its global distribution and dealer network through new strategic partnerships across Europe, Asia-Pacific, Africa and the Middle East.

The expanded network brings AI marine vision to more recreational and commercial boaters worldwide, backed by local sales, installation and technical support.

LOOKOUT's new international partners include:

- **Nordics:** PowerDuo (Finland) and Digital Skipper (Sweden)
- **Mediterranean:** Azimutel (Spain), RLR (Malta), and Promar (Turkey)
- **Portugal:** Nautiradar
- **Middle East:** Exalto Emirates

- **Africa:** C Dynamics International (South Africa)
- **Asia-Pacific:** ISCO (Japan), AMI and Exalto Emirates (Singapore), and Southern Seas Marine (Australia, New Zealand, and the South Pacific)

LOOKOUT fuses computer vision, augmented reality, and real-time hazard detection into a single, glanceable view at the helm. The system detects and tracks vessels, buoys, debris, and other navigation hazards in the conditions that defeat the human eye — night runs, low light, glare and crowded channels.

According to the U.S. Coast Guard's 2024 Recreational Boating Statistics, operator inattention and improper lookout are two of the leading contributing factors in boating accidents nationwide — precisely the gap a tireless second set of eyes is built to close.

"Our vision has always been to make AI marine vision available to boaters everywhere, regardless of where they operate," said David Rose, CEO of LOOKOUT.

"These partners bring deep regional expertise, exceptional customer relationships, and a shared commitment to defining what a modern helm should be. With this network in place, more captains than ever can go farther, stay out longer and come home safe. LOOKOUT is always on watch."

Each partner is an established marine electronics distributor or dealer with a reputation for delivering premium technologies to its market.

"C Dynamics International is committed to bringing our customers the most innovative technologies available to enhance safety, awareness and confidence on the water," said C Dynamics Owner Lindsay Weyer.

"LOOKOUT represents an exciting advancement in marine situational awareness by combining intelligent vision, augmented reality and real-time hazard detection in a solution that supports operators in all conditions. We're proud to partner with LOOKOUT and make this game-changing technology more accessible to boaters and marine professionals throughout our markets."

LOOKOUT integrates with Garmin, Simrad, Raymarine, Furuno, Volvo, Yamaha and other major marine electronics platforms, and is the winner of the 2025 IBEX Innovation Award.
